

Linear element with three diffusers for showers with external profiles
 AXRUBL_

Benedini Associati, 2002

Horizontal support which can also act as water supply element.

Finishes

Chrome

Materials

Brass

The horizontal support elements are made in chrome plated brass, and have a singular or dual function: as a support for the fixed wall and/ or as a water supply element. Water is supplied through spouts positioned on the cylindrical surface of the element or through a shower head connected to the element by means of a coupling (1/2" gas). All shower heads are equipped with silicon rubber nozzles. All showers in this price list already include the horizontal support elements as indicated in the compositions. The item can also be purchased separately. The horizontal support elements are simply hooked to the top edge of the crystal glass wall for showers with outer profiles.

Note: Length cm 70 / 100 (27" 9/16 - 39" 3/8)
